PHYSICS LETTERS B

A journal devoted to the rapid publication of letters in the fields of *Nuclear Physics* and *Particle Physics*.
Editors: P.M. Endt, *Utrecht*; R. Gatto, *Geneva*; H.M. Georgi III, *Cambridge, MA*; A.D. Jackson, *Stony Brook*; P.V. Landshoff, *Cambridge*; C. Mahaux, *Liège*; L. Montanet, *Geneva*; J.P. Schiffer, *Argonne*; K. Winter, *Geneva*.

INSTRUCTIONS TO AUTHORS

Physics Letters B is intended for rapid publication of important new results in nuclear and particle physics. Papers reporting such findings should normally not exceed four journal pages, and be accompanied by an abstract not exceeding 60 words. More detailed instructions are printed at the end of each Volume of Physics Letters B. Manuscripts should be submitted in triplicate (quadruplicate in the case of experimental particle physics), one copy of which is the typewritten original.

Contributions on experimental nuclear physics (excluding intermediate-energy physics and heavy-ion physics, see below) should be sent to:

P.M. Endt (Fysisch Laboratorium, Princetonplein 5, P.O. Box 80.000, 3508 TA Utrecht, The Netherlands),

those of experimental intermediate-energy and heavy-ion physics to:

J.P. Schiffer (Argonne National Laboratory, 9700 South Cass Avenue, Argonne, IL 60439, USA),

those on theoretical nuclear physics from European countries to:

C. Mahaux (Institut de Physique B5, University of Liège, B-4000 Liège, Belgium),

and from countries outside Europe to:

A.D. Jackson (Department of Physics, State University of New York at Stony Brook, Stony Brook, NY 11794, USA).

Contributions on experimental particle physics should be sent to:

L. Montanet and K. Winter (CERN, 1211 Geneva 23, Switzerland),

those on theoretical particle physics from Ireland, United Kingdom, Benelux, Scandinavian countries, German Federal Republic, German Democratic Republic, Poland, Czechoslovakia and the USSR to:

P.V. Landshoff (Department of Applied Mathematics and Theoretical Physics, University of Cambridge, Silver Street, Cambridge CB3 9EW, Great Britain),

from the remaining European countries to:

R. Gatto (CERN, Theory Division, 1211 Geneva 23, Switzerland),

and from countries outside Europe to:

H.M. Georgi III (Department of Physics, Harvard University, Cambridge, MA 02138, USA).

Submitted papers will be refereed and, if necessary, authors may be invited to revise their manuscripts. Proofs will *not* be sent, therefore authors should check their papers carefully before submission. If a submitted paper relies heavily on unpublished material, it would be helpful to have a copy of that material for the use of the referee.

By submitting a paper for publication in Physics Letters the authors imply that the paper has not been published previously nor is being considered for publication elsewhere.

SUBSCRIPTIONS

Sections A and B of PHYSICS LETTERS will each be published weekly. The subscription price of a volume of Physics Letters is Dfl. 205.00 (approx. $ 82.00) plus Dfl. 21.00 (approx. $ 8.40) handling and mailing costs. For 1984 7 volumes Physics Letters A at a total subscription price of Dfl. 1582.00 (approx. $ 632.80) including handling and mailing costs, and 13 volumes Physics Letters B at a total subscription price of Dfl. 2938.00 (approx. $ 1175.20) including handling and mailing costs, are announced.

PHYSICS REPORTS will be published approximately weekly. The subscription price of a volume of Physics Reports is Dfl. 205.00 (approx. $ 82.00) plus Dfl. 21.00 (approx. $ 8.40) handling and mailing costs. For 1984 12 volumes Physics Reports are announced at a total subscription price of Dfl. 2712.00 (approx. $ 1084.80) including handling and mailing costs.

The reduced combined subscription price for 20 volumes Physics Letters and 12 volumes Physics Reports is Dfl. 6272.00 (approx. $ 2508.80) including handling and mailing costs.

Subscriptions may be sent to your subscription-agent, bookseller or to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE AMSTERDAM, THE NETHERLANDS.

Claims for missing numbers should be made within two months following the date of publication. The publisher expects to supply missing numbers free only when losses have been sustained in transit and when stock will permit.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

Heavy Ion Collisions

edited by R. BOCK, *Gesellschaft für Schwerionenforschung, Darmstad, West Germany*

The increasing number and variety of heavy ion accelerators have produced a wealth of new information during the last ten years. Nevertheless, a comprehensive presentation of the field has been lacking. It is the aim of this book to fill this gap. Experts, actively working in research, were asked to provide well-balanced and not-too-specialised views which concentrate on essential results and on the underlying concepts of their respective fields.

Heavy Ion Collisions covers in three volumes, a substantial amount of heavy ion physics. **Volume I** is devoted mainly to *microscopic* aspects of heavy ion reactions, with chapters on elastic and inelastic scattering, transfer reactions, nuclear cluster correlations and resonance phenomena. In addition, this volume includes a contribution on relativistic heavy ion collisions, taking into account the latest developments in the field.

Volume II deals with the *macroscopic* aspects of heavy ion reactions, i.e. complete and incomplete fusion, deep-inelastic processes and their theoretical interpretations.

Volume III includes contributions on γ-ray spectroscopy, hyperfine interactions and selected aspects of heavy ion atomic physics. Focussing on essential results and on the underlying concepts and ideas, the three volumes of **Heavy Ion Collisions** will be of paramount value to graduate students entering the field and to specialists in research.

Volume I

1979 viii + 676 pages
Price: US $121.25/Dfl. 285.00
ISBN 0-7204-0738-9

CONTENTS: Preface. Elastic and inelastic heavy ion scattering *(A. Richter and C. Toepffer)*. Heavy ion transfer reactions *(L.B.J. Goldfarb and W. Von Oertzen)*. Nuclear cluster correlation *(A. Arima)*. Energy dependent structure in heavy ion interactions *(A. Gobbi and D.A. Bromley)*. Nuclear reactions between relativistic heavy ions *(R. Stock)*. Subject Index.

Volume II

1980 viii + 472 pages
Price: US $102.25/Dfl. 240.00
ISBN 0-444-85295-6

CONTENTS: Preface. Basic concepts in the description of collisions between heavy nuclei *(W. Nörenberg)*. Results of deep interactions between complex nuclei – complete and incomplete fusion *(M. Lefort)*. Dissipative collisions *(A. Gobbi and W. Nörenberg)*. Fusion and fission of heavy nuclei *(U. Mosel)*. Statistical theory of heavy ion reactions *(H.H. Deubler, K. Dietrich and H. Hofmann)*. Theory of fragmentation in fission, fusion and heavy ion scattering *(J.A. Maruhn, W. Greiner and W. Scheid)*. Subject Index.

Volume III

1982 viii + 674 pages
Price: US $140.50/Dfl. 330.00
ISBN 0-444-85352-9

CONTENTS: Preface. In-beam gamma-ray spectroscopy with heavy ions *(D. Pelte and D. Schwalm)*. Heavy-ion atomic physics *(W. Greiner and W. Scheid)*. Hyperfine interactions in isolated ions *(G. Goldring)*. Probing nuclei far from stability with heavy ions *(J.H. Hamilton)*. Subject Index.

Light, Volume 1
Waves, Photons, Atoms

by HERMANN HAKEN, *Universität Stuttgart, F.R.G.*

1981 xvi + 354 pages Price: US $36.25/Dfl. 85.00 ISBN 0-444-86020-7

This work, to be published in 3 volumes, provides an introduction to the theory of light and its interaction with matter.
The two volumes to be published later, will cover, respectively, laser physics and non-linear optics. Altogether the three volumes comprise the first *coherent text* to present the full range of modern optics ranging from its fundamental concepts to the generation of coherent light and its most recent physical applications. Starting from a rather elementary level, the book includes a self-contained, concise introduction to the quantum theory of matter and develops in detail the quantum theory of light.
It presents the approaches needed to cope with the various interaction processes between light and matter and illustrates them by various examples.
The final chapters deal with modern methods of quantum statistics, including Langevin and density matrix equations which have become indispensable tools of quantum optics.

CONTENTS: Introduction. Preface. List of Symbols. *Chapters:* 1. What is Light? 2. The Nature of Light: Waves or Particles? 3. The Nature of Matter: Particles or Waves? 4. Response of Quantum Systems to Classical Electromagnetic Oscillations. 5. Quantization of Light Field. 6. Quantization of Electron Wave Field. 7. The Interaction Between Light Field and Matter. 8. Quantum Theory of Coherence. 9. Dissipation and Fluctuations in Quantum Optics.

Vol. II - **Laser Light Dynamics**

In preparation
This volume will deal with laser physics emphasizing laser theory from a physical point of view.

Vol. III - **Nonlinear Optics**

In preparation
This concluding volume will be devoted to the theory of nonlinear processes which arise when laser light interacts with matter.

Quantum Field Theory of Solids

Haken, H.

1983 xvi + 330 p.
US $32.00/Dfl. 75.00
ISBN 0-444-86737-6

This book provides a simple introduction to the concepts and methods of quantum field theory. The concepts dealt with are mainly the so-called elementary excitation, such as phonons, excitons, magnons, polarons, polaritons, and holes. In the course of the book, these concepts are explained systematically and the physical models underlying them are worked out.

"... The author has selected the most important features for presentation so that the quantization of lattice vibrations is shown explicitly in one dimension only as this includes all essential features."

Diffusion and Defect Data

"... this book is one of the best expositions available of nonrelativistic QFT and its solid state applications..."

Leptons, Hadrons and Nuclei

by FLORIAN SCHECK, *Johannes Guttenberg Universität, Mainz, F.R.G.*

1983 xx + 388 Price: US $61.50/Dfl. 160.00 ISBN 0-444-867 10-8

In the early days the theory of elementary particles and the physics of nuclei used to be just two facets of one and the same field whose primary motivation was the investigation of the nature of the elementary constituents of matter and the interactions between them.
Under the impetus of the great discoveries in particle physics in the 1950's and early 1960's the two fields drifted apart and they both became respectable complex disciplines of their own. Nevertheless there has been a continuing effort during the years to save at least something of the original unity and to bridge the now independent fields to the benefit of both. These efforts materialized in an ever increasing and important branch of research at the "meson factories", at the electron accelerators in the range of up to several GeV, and at some of the particle accelerators at high energies – a set of research activities which is often referred to as Intermediate Energy Physics and which is regularly covered by the well-known series of conferences on High-Energy Physics and Nuclear Structure.
This book emanated from a series of lectures on General Particle Physics, Electroweak Interactions and Intermediate Energy Nuclear Physics that the author gave at the Eidgenössische Technische Hochschule in Zürich, at the 3e cycle de la Physique en Suisse Romande and at the University of Mainz, at the level of advanced quantum mechanics. The book is written on the assumption that the reader is familiar with the general principles of quantum mechanics as well as with the basics of the theory of special relativity. The text is to a large extent self-contained. All important definitions and basic notions are explained at the appropriate places in the text and many examples are given. Exercises are given at the end of each chapter.

- theory of quantized fermion field in interaction with photons and weak gauge bosons;
- theory and phenomenology of electromagnetic and weak interactions of leptons and quarks in the framework of local gauge theories;
- interactions of hadrons and leptons with nuclei.

CONTENTS: Chapters I. Scattering of strongly interacting particles on nuclei. II. Hadronic atoms. III. Fermion fields and their properties. IV. Electromagnetic processes and interactions. V. Weak interactions. Bibliography.

NIELS BOHR Collected Works

The influence of Niels Bohr's work, of his approach to research, both practical and theoretical, is widely felt today. His contributions to our knowledge of the atomic constituents of matter and to our view of science, remain of fundamental importance.

The publication of his collected works will give historians of science and scientists easy access to a life-work entirely devoted to the rational analysis of the laws of nature and of the singular character of their meaning for us.

"His Collected Works will stand as one of the very greatest documents in the history of science and of human thought."

Physics Bulletin

Volume 1

Early Work (1905–1911)

Nielsen, J.R. *(editor)*

1972 xlviii + 608 pages.
US $125.50/Dfl. 295.00
ISBN 0-7204-1801-1
Subscription price: US $106.50/Dfl. 250.00

"The papers involving such a person are bound to be exceedingly valuable... This first volume... marks the beginning of a series attempting to publish the most relevant of that material which is not already generally available."

Physics Bulletin

Volume 2

Work on Atomic Physics (1912–1917)

Hoyer, U. *(editor)*

1981 xvi + 648 pages.
US $125.50/Dfl. 295.00
ISBN 0-444-86132-7
Subscription price: US $106.50/Dfl. 250.00

This volume deals with the years when Bohr was at his most creative, conceiving revolutionary new ideas on absorption phenomena and on atomic and molecular physics.

Contents: **Parts: I.** Absorption of Charged Particles. **II.** Constitution of Atoms and Molecules. **III.** Consolidation of the Quantum Theory of the Atom. **IV.** Selected Correspondence (1912–1917).

Volume 3

The Correspondence Principle (1918–1923)

Nielsen, J.R. *(editor)*

1976 xii + 702 pages.
US $136.25/Dfl. 320.00
ISBN 0-7204-1803-8
Subscription price: US $115.00/Dfl. 270.00

During this period Bohr's researches had a double aim: to develop a consistent and adequate quantum theory and to explain the structures and properties of the elements of the periodic system. This volume contains the papers and manuscripts dealing mainly with the elaboration of the general quantum theory.

Volume 4

The Periodic System (1920–1923)

Nielsen, J.R. *(editor)*

1977 x + 766 pages.
US $49.00/Dfl. 350.00
ISBN 0-7204-1804-6
Subscription price: US $127.50/Dfl. 300.00

Whilst the previous book deals primarily with the development of the quantum theory, this volume contains the papers treating the application of the theory to the problem of atomic structure and the explanation of the periodic system of the chemical elements.

Contents: **Part I.** – Atomic Structure. **Part II.** – Selected Correspondence (1920–1924).

In Preparation:

Volume 5

The Emergence of Quantum Mechanics (mainly 1924–1926)

Stölzenberg, K. *and* Rüdinger, E. *(editors)*
